Chandan Giri

Lucknow, India | +91 96280 68195 | su-24036@sitare.org | linkedin.com/in/chandan-giri | github.com/RishiGoswami-code

Summary

Smart India Hackathon 2025 National Finalist and Full-Stack & AI Engineer with production experience at Sendlume, where I reduced token costs by 99% (3M → 20K) and built systems processing 10,000+ events/day. Open-source contributor across 3 organizations including **sktime** (7k+ GitHub stars). B.Tech Computer Science student at Sitare University (90% merit scholarship), specializing in backend engineering, distributed systems, and AI/ML pipelines.

Education

Sitare University (with SRMU) Lucknow, India

B.Tech, Computer Science | ***Sitare Foundation Scholar – 90% Tuition Merit Award*** *Aug 2024 – May 2027 (Expected)*

- **Relevant Coursework:** Machine Learning, Artificial Intelligence, Distributed Systems, Advanced Data Structures & Algorithms, Database Management Systems, Object-Oriented Programming, Python & Java
- **Achievement:** Smart India Hackathon 2025 National Finalist – ML Lead & System Architect

Technical Skills

Languages: Python, Java, JavaScript, TypeScript, C++

ML & AI: Scikit-learn, TensorFlow, PyTorch, NumPy, Pandas, CNNs, NLP, Time-Series Forecasting, LLM APIs, Pydantic AI, BERT, LangChain, Vector Databases (FAISS, Pinecone, pgvector)

Backend & APIs: FastAPI, Flask, Django, Express.js, REST APIs, Microservices, WebSockets, Event-Driven Architecture

Frontend: React, React Native, TailwindCSS, HTML, CSS, Chart.js

Databases & Caching: PostgreSQL, MongoDB, Firestore, Redis, Query Optimization, Indexing

DevOps & Cloud: Docker, Kubernetes, GitHub Actions, CI/CD, Linux, Shell Scripting, Terraform, AWS (S3, EC2), Azure, GCP, Prometheus, Grafana, ELK Stack, Neon, Vercel

Concepts: System Design, Distributed Systems, API Design, Scalability, Load Balancing, Caching, Agile/Scrum

Experience

Sendlume Remote

Full-Stack & AI Engineer *Sept 2025 – March 2026*

- **Led architecture** of Sendlume's AI workflow generation system, reducing LLM token costs from **3M to 20K (99% reduction)** by redesigning prompt pipelines, cutting infrastructure cost significantly.
- Designed and deployed a **pixel-level email tracking microservice** with horizontal scalability – using invisible beacon technology and an async event queue to capture opens, clicks, and engagement signals, processing **10,000+ events/day** with high reliability.
- Engineered an **AI workflow canvas** with a node-based visual interface backed by a stateless REST API, enabling non-technical users to design and deploy automation pipelines without writing code.
- Built a **real-time analytics dashboard** using WebSocket streams and Redis-cached PostgreSQL aggregations, delivering live campaign KPIs with **sub-100ms latency**.
- Maintained scalable DevOps infrastructure using **Neon, Redis, Docker**, improving system uptime and deployment efficiency across production environments.

JPMorgan Chase & Co. Self-Directed Quantitative Research

Quantitative Research Project *2026*

- **Price Forecasting:** Modeled natural gas prices using time-series techniques – seasonality decomposition and multi-horizon forecasting – achieving reliable short- and long-term price projections.
- **Storage Contract Pricing:** Built a P&L estimation engine for commodity storage contracts, factoring in injection, withdrawal, and holding costs to support trading decisions.
- **Credit Risk Modeling:** Developed an ML-based **Probability of Default (PD)** model using logistic regression, improving loan default prediction accuracy by ∼**15%** over baseline heuristics.
- **FICO Score Bucketing:** Segmented credit scores into dynamic risk tiers using statistical bucketing, directly informing credit approval decision thresholds.

Projects

Viking Validators | ***Smart India Hackathon 2025 National Finalist*** | **GitHub**

- Built a production platform for academic document fraud detection using an **ensemble ML pipeline** (CNN, Random Forest, SVM, Logistic Regression) achieving **∼94% accuracy**; deployed via stateless REST API (Express.js) with MongoDB for horizontal scalability.
- *FastAPI, Scikit-learn, TensorFlow, Express.js, MongoDB, NumPy, OpenCV, Docker*

HighPulse.ai | ***Multi-Platform Social Media Intelligence Analyzer*** | **GitHub**

- Built a social intelligence platform scraping and analyzing content from YouTube, Reddit, X, Facebook, and Instagram; used **Gemini AI** for trend analysis exposed via Flask REST API with **Redis caching** and Chart.js dashboards.
- *Python, Flask, BeautifulSoup, Gemini AI, Social Media APIs, Redis, JavaScript, Chart.js*

PresenceSync | ***Fraud-Resistant Attendance System*** | **GitHub**

- Engineered a fraud-resistant attendance system using GPS geofencing, dynamic QR codes, facial recognition, and IP fingerprinting; architected with **FastAPI microservices, Docker, and Kubernetes** to handle **500+ concurrent check-ins** with zero proxy tolerance.
- *Python, FastAPI, Firestore, OpenCV, GPS APIs, Docker, Kubernetes, Azure, Microservices*

Open Source Contributions

Contributor | ***sktime, AOSSIE, Stability Nexus***

- **sktime** (7k+ GitHub stars): Implemented an **async data loading feature** enabling non-blocking, progressive data fetching from URLs, files, and pandas – improving ML pipeline performance in the sktime-mcp project; **PR merged**.
- **Stability Nexus:** Added a new **oracle feature** with full configuration support aligned with the **Chainlink AggregatorV3** interface, enabling seamless on-chain historical price data access; **PR merged**.
- **AOSSIE:** Improved UI/UX consistency across **2 merged PRs** – redesigned key interface components, improving usability and visual accessibility of open-source applications.

Achievements & Scholarships

Smart India Hackathon 2025 | ***National Finalist – Team Leader & ML Architect*** 2025

- Led team "Viking Validators" to India's largest government-organized hackathon national finals (lakhs of competing teams); served as ML Lead and primary system architect of the document fraud detection engine.

Sitare Foundation Scholarship | ***Merit-Based – 90% B.Tech Tuition Award*** Aug 2024 – Present

- Awarded a highly competitive merit-based scholarship covering 90% of B.Tech tuition, recognizing exceptional academic potential and commitment to computer science.
